Adaptiv | Home Office Solutions

Cloud Managed Networking Solutions for Home Office Workers

Millions of workers have shifted to working from home, which makes business productivity contingent on the performance of home office connectivity.

Home internet connections cannot ensure the quality of experience for remote employees, with real-time apps such as UCaaS and videoconferencing suffering the most.

VPN solutions provide secure connectivity, but they can cause bandwidth performance to slow to a trickle when too many remote workers log into the company network concurrently.

Home Office Connectivity Challenges

- Lack of Network Visibility and Support
- Risk of Internet Downtime
- No Control of Application Performance
- Keeping Data Secure

Optimal work from home productivity requires a simple connectivity solution that delivers business-grade performance and security to the home office at an affordable price.

A Simple, Cost-Effective Solution

Adaptiv Home Edition provides a simple, robust managed connectivity solution for the home office that delivers superior user quality of experience for UCaaS, video conferencing and business cloud applications managed by an Adaptiv | Edge device installed in the remote workplace.

Features

Cloud Management

Professional 24/7 support with cloud monitoring, remote troubleshooting and online visibility for network analytics and SLA reporting.

Cloud Reliability

Avoid lost productivity caused by network downtime with link failover that keeps remote workers connected through link outages.

Cloud Performance

Prioritize quality for business-critical applications with QoS protection that guarantees crystal clear voice and video calls.

Adaptiv | Home Office Solutions

Cloud Managed Networking Solutions for Home Office Workers

UCaaS and Teleconferencing

Voice and video calls are essential for keeping remote workers connected with coworkers and customers, but call quality is only as good as the network connection. Adaptiv Networks guarantees crystal clear call quality for your home office workers with no dropped calls, even during peak periods of network congestion.

Cloud Office Applications

Telecommuters who rely on cloud applications like Microsoft O365 or G Suite, can experience frustrating lag times that drain productivity. Adaptiv Networks delivers a more responsive user experience for home office workers who rely on business cloud applications like Microsoft and Google.

Secure SD-WAN Access from Home

For remote employees who need a secure connection to corporate applications, they may get frustrated by the complexity of managing their VPN access. Adaptiv Networks offers managed SD-WAN solutions that give home office workers a simple way to securely connect to the corporate network with minimal IT effort.

Network-as-a-Service

Home Edition solutions are only available through Adaptiv certified service providers. They are sold as a simple subscription license that includes the Adaptiv | Edge device, cloud gateway access, and centralized monitoring and management.

Adaptiv Home Edition Solutions

Cloud Monitoring and Support	Unbreakable Internet with Seamless Failover	Quality Control for Voice and Video Calls	Secure Access with SD-WAN Encryption

Adaptiv | Home Office Solutions

Cloud Managed Networking Solutions for Home Office Workers

SD-INTERNET Home Edition

Ideal for remote workers who want superior quality of experience for UCaaS and business-critical cloud services.

SD-WAN Home Edition

Secure access for remote workers who want superior performance for corporate SD-WAN, UCaaS and Cloud apps.

Introducing My Connect*

For Adaptiv | SD-WAN customers, My Connect is the simple, powerful and secure way for remote workers to access corporate SD-WAN. There is no edge device required for My Connect as it runs as an app on the remote worker's PC.

An Edgeless SD-WAN Solution no CPE required!

Download and install My Connect on any Windows PC. Switch it on to get secure, quality SD-WAN access.

Much More than a VPN

Secure access to corporate SD-WAN, plus centralized management with link conditioning and failover.

Quality-as-a-Service™

Dynamic link conditioning boosts the performance and quality of latency sensitive business applications.

* Available in April 2021, My Connect is sold as an add-on user license for existing Adaptiv SD-WAN customers

Adaptiv Networks | Solutions

We build smarter business networks that combine agile cloud connectivity with professional network management to help you free up valuable IT resources and accelerate your digital transformation.
