SD-WAN for Healthcare

Powering the Digital Healthcare Transformation

Digital patient records and medical technologies like telehealth, have transformed healthcare - making network connectivity a vital tool that enables health clinics and medical offices to successfully deliver care and improve patient outcomes.

Managed SD-WAN is a simple, secure and reliable connectivity solution that allows healthcare providers to stay focused on their patients instead of their network.

Healthcare Connectivity Requirements

- Unbreakable Access with No Disruptions to Patient Care.
- Telehealth Calls with Crystal Clear Voice and Video.
- Data Encryption to Protect Patient Confidentiality.
- Control Bandwidth Cost and Minimize IT Complexity.

What healthcare providers need is a simple, reliable connectivity solution that delivers unbreakable internet access with minimal on-site IT skill required.

A Simple, Cost-Effective Solution

Adaptiv Healthcare SD-WAN provides a robust connectivity solution that's easy to buy, easy to deploy, and easy to own. We create unbreakable internet access that eliminates disruptions that can put patient outcomes at risk. Our patented quality assurance capabilities deliver superior voice and video for telehealth calls and the solution is professionally monitored and managed, so you can focus on your patients instead of your network.

Advantages for Healthcare Providers

Always on Connections

Connectivity provides access to patient records, and enables communication with insurers, pharmacies, and other medical professionals. Network outages put patient outcomes at risk.

Our automatic seamless failover keeps you online 24/7, 365.

Telehealth Quality Assurance

Telehealth and Telemedicine are now essential for safely delivering quality patient care.

We ensure crystal clear voice and video for telehealth calls with patients and for calls with pharmacies, insurers and other healthcare providers.

Secure SD-WAN Encryption

Patient confidentiality requires data security for digital access and transfer of patient records.

Our SD-WAN solution provides end-to-end encryption to secure data, even using low-cost broadband connections.

Network Agility

New medical technologies and business growth can change your IT network requirements. You need a network that allows you to embrace change without complexity or disruptions.

Our solution makes it easy to quickly add cloud bandwidth or connect new clinics and offices.

Focus on Your Patients

Quality care requires attention to details, but network issues can cause distractions and frustrate staff.

Our SD-WAN solution is monitored and managed by certified IT pros so you have one less thing to worry about.

Reduce OPEX

Cost control is key to sustained profitability for medical offices and healthcare clinics.

Our solution is a fast, reliable, managed network that costs less. A HIPPA compliant SD-WAN solution designed to fit your IT budget.
