

Manufacturing SD-WAN

Optimize Productivity with a Smart Factory Network

Digital transformation is driving manufacturing towards Industry 4.0 with innovations that are increasing safety, efficiency, and productivity. Smart factories are leveraging cloud computing, artificial intelligence, and the Internet of Things, which means they rely on network connectivity more than ever before.

Manufacturing Connectivity Requirements

- Unbreakable Connectivity for Non-Stop Operations.
- Quality Assurance for Communication and Cloud Apps.
- Control Network Cost and Minimize IT Complexity.
- Centralized Management with 24/7 Support.

To stay competitive, manufacturers need a simple network solution that delivers rock-solid 24-7 connectivity plus the agility to embrace new technologies.

A Simple, Cost-Effective Solution

Adaptiv Manufacturing SD-WAN provides robust connectivity that's easy to buy, easy to deploy, and easy to own. We create unbreakable internet access that eliminates disruptions that can put factory productivity at risk. Our patented technology delivers superior call quality and cloud performance using any broadband connections to help control your bandwidth costs. Best of all, our solution is professionally monitored and managed with 24/7 support, so you can focus on productivity instead of your network.

Advantages for Manufacturers

Always on Connections

If your factory isn't connected, you're losing money. You need a resilient network that ensures non-stop production.

We offer you peace of mind with our automatic seamless failover that keeps you online 24/7, 365.

Focus on Your Operations

Meeting production deadlines requires focus, so you can't afford to be distracted by network issues.

Our SD-WAN solution is remotely monitored and managed by certified IT pros so you have one less thing to worry about.

Cloud Readiness

Technology is digitizing the means of production, with data processing and analytics being powered by the cloud.

We give you the flexibility to seamlessly run any cloud apps you need, with direct peering connections that reduce latency for cloud services.

Network Agility

When manufacturers grow and adopt new technologies, they need an agile network that's ready to grow with them.

We make it easier than ever to add new sites or scale more bandwidth to existing sites whenever you need it.

Supply Chain Management

Real-time communications is the key to keeping everything on schedule.

We add reliability and quality assurance to your cloud voice and collaboration apps ensuring your voice and video calls are heard loud and clear.

Reduce OPEX

Cost control is key to sustained profitability.

We help you leverage low-cost connectivity to build a powerful factory network with superior performance for less cost. Central management brings economies of scale to your IT budget.
