

# SDWAN COMPLETE: OPTIONS TO ENHANCE YOUR SOLUTION

**SDWAN COMPLETE** is the world's most comprehensive network solution to date. Via seamless integration with best of breed technologies, our unique package options provide optimal application and network performance and security across your entire business, locally, regionally and globally – giving you a single, simple, cost effective, feature rich solution.

“We provide SD-WAN and SASE solutions tailored to suit your budget, application requirements and business needs, and **SDWAN COMPLETE** takes this one step further by introducing additional components to further enhance your solution and the benefits to you“

## SEE WHAT'S POSSIBLE WITH SDWAN COMPLETE

1. Your SD-WAN solution is tailored to your exact needs using the best fit vendor technology
2. Your business, your applications and your users are secured by best of breed security providers and frameworks – SASE, SSE, NESaaS
3. Connectivity providers and technologies are selected for each site to ensure performance, resilience, redundancy and value for money
4. Your solution orchestrator is hosted and managed for you
5. You run SD-WAN and security (or other VNFs) on a single low energy hardware device, or virtual devices
6. Layer 4 data assurance is provided by crypto-segmentation
7. Replace global MPLS and the need for global backbone network with intelligent Internet middle mile optimisation
8. Compliant access to mainland China using broadband Internet access
9. Connect to every IaaS, SaaS and public Cloud instance
10. SaaS optimisation enhances Teams, Zoom and O365 traffic
11. Seamlessly communicate between different SD-WAN vendor solutions
12. VOIP solutions seamlessly added to your network
13. Hybrid, remote and mobile workforce integration

## WHICH COMPONENTS DO YOU NEED?

### 1. SD-WAN VENDORS

- Adaptiv Networks
- Aruba HPE
- Aryaka
- Cisco Meraki
- Extreme / Ipanema
- Fortinet SD-WAN
- Oracle SD-WAN
- Masergy
- VMWare VeloCloud

### 2. INTEGRATED SECURITY

- OEM firewall
- Check Point FW
- Check Point Cloud FW
- Palo Alto Cloud FW
- Netskope Cloud FW
- Zscaler Cloud FW
- SASE
- SSE
- NESaaS

### 3. CONNECTIVITY TECHNOLOGIES

- Ethernet
- MPLS
- 4G, 5G, LTE
- Dedicated Internet
- Broadband
- Satellite

### 4. HOSTED ORCHESTRATOR

Your SD-WAN orchestrator is hosted within SDWAN Cloud, as a fully managed service, ensuring you can always reach your control centre.

### 5. UNIVERSAL HARDWARE

Our powerful VENA and VECTA hardware devices run SD-WAN and Security on a single device, with up to 5Gbps throughput available. Use up to 6 connections per device.

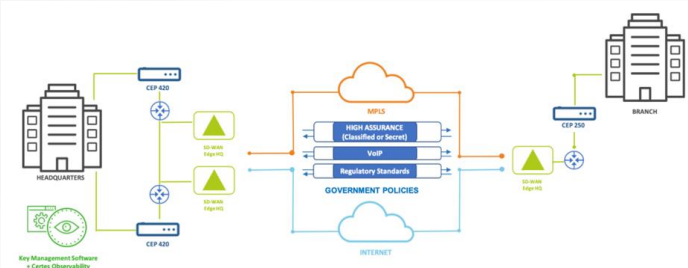

CONSULT | DESIGN | PROVE | DEPLOY | MANAGE | SUPPORT | RE-TECH

## 6. LAYER 4 CRYPTO SEGMENTATION

Data assurance is solved with crypto-segmentation in which fine-grained policies are defined per policy and classification across the SD-WAN fabric. Whether it is keeping your encrypted data secure and separate from the provider network and/or defining fine-grained policies for you to classify important data, we provide the data assurance MSPs and their end-users are seeking while mitigating risk and reducing the attack surface for everyone.

## 7. ELIMINATE MPLS & GLOBAL BACKBONE REQUIREMENTS

Optimise the Internet middle mile connection between your sites to guarantee better than MPLS SLAs and performance, while adding in redundancy, intelligent path selection and routing. The core technology behind this makes the Internet act like carrier-grade private WAN links, and is backed by a carrier grade SLA.

## 8. CONNECT TO CHINA WITHOUT MPLS

Eliminate the usual high cost and complexity with high-performance SD-WAN-as-a-service that provides compliant access to mainland China using Internet broadband connections. Customers can expect lightning-fast file transfers, pristine voice and video sessions, and overall performance comparable to MPLS.

“There is not a single off-the-shelf SD-WAN that is suitable for all customers – that is why it’s important to work with a provider that aligns the correct vendor technologies to create a solution tailored to your exact requirements .”

## 9. SDWAN CLOUD

Connect to every IaaS, SaaS and public Cloud instance and to over 700 global DC locations directly from your SD-WAN network.

## 10. SAAS OPTIMISATION

Your MSTEams, Zoom and Skype traffic is optimised as close as possible to the SaaS provider ensuring you never buffer or drop a call.

## 11. COMBINE SD-WAN VENDORS

Seamlessly communicate between different SD-WAN vendor solutions required after mergers or acquisitions.

## 12. PHONES 1-2-3

Include VOIP handsets, softphones and calling packages, provided and supported as part of your network.

## 13. REMOTE WORKING SOLUTIONS

SDWAN REMOTE automatically provides encrypted access back to the corporate network, using multiple different connections and by combining intelligent session-based path steering with dynamic link conditioning, SDWAN REMOTE boosts the performance of your latency sensitive applications.

## CERTIFIED EXPERTS

- The UKs only SD-WAN Subject Matter Experts
- The only company in the world with 2 SD-WAN SMEs
- Over 35 vendor certifications
