

SDWAN Solutions Secures Investment and Announces Expansion into APAC Region With Leading Cyber-security MSSP, IPDC Singapore.

[SDWAN Solutions](#), a leading global SD-WAN network technology and SASE security company, announce investment in their SDWS Group and regional growth into Asia. **IPDC (Singapore)** and SDWAN Solutions will be opening an office imminently in Singapore, taking their operations into APAC from the UK (London) EU (Brussels) and South Africa (Johannesburg).

Anthony Senter, Co-founder and CEO says of the investment and growth: “Our goal is to democratise SD-WAN and SASE for all businesses of all sizes and budgets, everywhere - no business should be left out, especially when it comes to data assurance and fighting cyber-crime. Via our Asia / APAC partnership with security experts IPDC (Singapore) and our global network of R&D labs, we will reach that goal even sooner, and are already working together on exciting new innovations, like our unique SASE SELECT product.

Matthew Tan, IPDC Co-founder says, “The business combination is an outstanding opportunity to leverage the complementary nature of IPDC customers and SDWAN Solutions product portfolios and continual innovation. Our shared vision and passion for innovative network security solutions will benefit our customers through an enhanced value proposition, including a fully integrated managed service platform for the APAC region.”

SDWAN Solutions is a fast-growing specialist SD-WAN and SASE Managed Service Provider company, blazing a trail in a field historically dominated by tier one providers. There is a growing recognition that these tech giants cannot provide the level of service, supportive management and more importantly, the specialist skills set that an SME sized MSP delivers. SDWAN Solutions are recognised thought-leaders and true experts in their field being the only company on the planet with two double accredited SD-WAN Subject Matter Experts. They’re also known as disruptive innovators with a comprehensive range of world-first innovations and routinely beat the tech giants to market, which is what attracted founder of IPDC, Mr Pek Loon Tan to investing in the first place.

Pek Loon Tan, Co-founder of IPDC Singapore says, “I’ve watched Anthony and his partners’ journey over recent years with great interest. They are consistently innovative and have an exceptional ability to provide solutions that deliver exactly what individual customers and businesses need. Being ahead of the curve, in terms of both products and service, is what made them our first choice when looking for a mutual collaboration for technological advantage and excellence.”

Toby Sturridge CTO and Co-founder of SDWAN Solutions says, “We’ve been approached several times over the past few years by companies seeking to invest, or acquire our unique product and skills set. IPDC was the first company with total professional and personal synergy, aligning our growth strategy and vision with theirs. This partnership delivers true collaboration on a global scale, ensuring everyone, every business of every size and regardless of geography, has access to the very latest network and security technology that will enable them to thrive.”

Anthony Senter continues, “I have known one of the founders of IPDC in a professional capacity for 15 years and we’ve worked on numerous network and security projects. Trust and respect in our respective skills, knowledge and experience is already in place and our collective vision fully aligned.” He concludes. “For SD-WAN Solutions it is very much business as usual throughout the investment and growth period and daily operations. The only changes are not more of the same but more of the more! Accelerated product growth will bring benefits to our customers and the industry as a whole.”
